

Dalton State College

Mean Comparisons August 2012

Interpreting the Mean Comparisons Report

Sample

The Mean Comparisons report is based on information from all randomly selected or censusadministered students for both your institution and your comparison institutions. Targeted and locally administered oversamples and other non-randomly selected students are not

Variables

The items from the NSSE survey appear in the left column in the same order and wording as they appear on the instrument. The name of each variable appears in the second column for easy reference to your data file and the summary statistics at the end of this section. Response options are also provided to help you interpret the statistics.

Benchmark Items that make up the five "Benchmarks of Effective Educational Practice" are indicated by the following: LAC=Level of Academic NSSE 2012 Mean Comparisons Challenge **NSSEville State University** ACL=Active and NSSEville State compared with: Collaborative Learning Mid East **SFI**=Student-Faculty NSSEville State Private Carnegie Class Interaction In your experience at your institution during the current school year, about how often have you **EEE**=Enriching Educational 1. Additional details

Statistical Significance

Items with mean differences that are larger than would be expected by chance alone are noted with one, two, or three asterisks, referring to three significance levels (p<.05, p<.01, and p<.001). The smaller the significance level, the smaller the likelihood that the difference is due to chance. Statistical significance does not guarantee the result is substantive or important. Large sample sizes (like those produced by NSSE) tend to generate more statistically significant results even though the magnitude of mean differences may be inconsequential. Consult effect sizes (see below) to judge the practical meaning of the results.

Effect Size

Effect size indicates the "practical significance" of the mean difference. It is calculated by dividing the mean difference by the pooled standard deviation. In practice, an effect size of .2 is often considered small, .5 moderate, and .8 large. A positive sign indicates that your institution's mean was greater, thus showing an affirmative result for your institution. A negative sign indicates the institution lags behind the comparison group, suggesting that the student behavior or

institutional practice represented by the item may warrant attention. An exception to this interpretation is the "coming to class unprepared" item (item 1f.) where a negative sign is preferred (i.e., meaning fewer students reporting coming to class unprepared).

Class

regarding weighting can be found on the NSSE Web site.

nsse.iub.edu/links/institutional reporting

Results are reported separately for first-year students (FY) and seniors (SR). Institution-reported class ranks are used.

^a All statistics are weighted by gender and enrollment status. Comparison group statistics are also weighted by institutional size.

^b The 95% confidence interval for the population mean is equal to the sample mean plus/minus 1.96 times the standard error of the mean.

^c A measure of the amount individual scores deviate from the mean of all the scores in the distribution.

^d Degrees of freedom used to compute the t-tests. Values differ from the total Ns due to weighting and whether equal variances were assumed.

e Statistical significance represents the probability that the difference between the mean of your institution and that of the comparison group occurred by chance.

f Effect size is calculated by subtracting the comparison group mean from the school mean, then dividing the result by the pooled standard deviation.

^a All statistics are weighted by gender and enrollment status. Comparison group statistics are also weighted by institutional size.

^b The 95% confidence interval for the population mean is equal to the sample mean plus/minus 1.96 times the standard error of the mean.

^c A measure of the amount individual scores deviate from the mean of all the scores in the distribution.

^d Degrees of freedom used to compute the t-tests. Values differ from the total Ns due to weighting and whether equal variances were assumed.

e Statistical significance represents the probability that the difference between the mean of your institution and that of the comparison group occurred by chance.

f Effect size is calculated by subtracting the comparison group mean from the school mean, then dividing the result by the pooled standard deviation.

^a All statistics are weighted by gender and enrollment status. Comparison group statistics are also weighted by institutional size.

^b The 95% confidence interval for the population mean is equal to the sample mean plus/minus 1.96 times the standard error of the mean.

^c A measure of the amount individual scores deviate from the mean of all the scores in the distribution.

^d Degrees of freedom used to compute the t-tests. Values differ from the total Ns due to weighting and whether equal variances were assumed.

e Statistical significance represents the probability that the difference between the mean of your institution and that of the comparison group occurred by chance.

f Effect size is calculated by subtracting the comparison group mean from the school mean, then dividing the result by the pooled standard deviation.

Frequency Distributions August 2012

Interpreting the Frequency Distributions Report

Variables Sample Class The items from the NSSE survey appear in the The Frequency Distributions report is based on information from all randomly selected or Frequency left column in the same order and wording as census-administered students for both your institution and your comparison institutions. distributions are Targeted and locally administered oversamples and other non-randomly selected students are they appear on the instrument. reported separately for not included. first-year students and seniors. Institutionreported class ranks **Benchmark** are used. Items that make up the five NSSE 2012 Engagement Item Frequency Distributions "Benchmarks of Effective **NSSEville State University** Educational Practice" are indicated by the following: CLQUES 211 contributed to class (ACL) Sometimes 2 905 34% 14 781 35% 57 335 35% 2.088 22% 12 633 **LAC**=Level of Academic Challenge 33% 57,083 3,048 17,608 Often Very ofter 29% 2.079 29% 11.163 26% 44.027 49% 4.058 44% 23.086 42% **ACL**=Active and Collaborative 8,162 100% 42,326 100% 163,367 100% 9,318 100% 54,228 100% 192,908 1009 CLPRESEN Never 21,727 Sometimes Count Learning Often 240 27% 47 5% 2,406 30% 802 11% 11,642 28% 3,780 9% 42,552 26% 438 43% 255 24% 3 688 39% 20.570 37% 71 247 36% 13,872 2,638 28% 15,083 Very often **SFI**=Student-Faculty Interaction The Count column 8,185 100% 42,364 100% 163,424 100% 9,364 100% 54,473 100% Prepared two or more 4,445 11% 2.658 32% 72 374 37% 346 39% 12.162 29% 49.181 30% 384 38% 3.644 38% 19.675 36% **EEE**=Enriching Educational represents the actual a paper or assignmen before turning it in 2.709 33% 14.262 34% 2.451 27% 15,467 Often 52,973 Very often 1.803 25% 11,341 27% 40 180 25% 1,628 18% 11,403 21% number of students **Experiences** 8,130 100% 54,366 100% 42,210 100% 162,900 100% 9,347 100% Worked on a paper or 133 2% 1,558 19% 805 2% 7,790 19% 3,275 30,757 88 1% 1,045 12% 584 1% 5,944 11% 2,004 1% 22,154 12% 12 1% 189 21% project that required Sometimes who responded to the **SCE**=Supportive Campus integrating idea Often 438 48% 3,796 46% 2,696 33% 18,693 44% 71.661 43% 3.565 38% 20,389 38% 71,169 50% Very ofter 272 29% 15.110 35% 57.856 35% 551 54% 4.669 49% 27.625 particular option in Environment Never 10,590 perspectives (different Sometime 2,548 30% 12,747 30% 50,123 31% 2,780 29% 15,326 28% each question. Variable Names The name of each variable appears in Column Percentage (%) the first column for easy reference to **Response Options** your raw data file and the Mean Response options are listed as they appear on the This column presents the weighted percentage of students responding to the particular option in each question. Comparisons report. instrument.

Weighting

Weights adjusting for gender and enrollment status (and by institutional size for comparison groups) are applied to the percentage column (%) of this report. Weights are computed separately for first-year students and seniors. Weighted results present a more accurate representation of your institution and comparison group students. *Only the column percents are weighted. The count is the actual number of respondents. Because the counts are unweighted and the column percentages are weighted, one cannot replicate column percentages from counts.* Additional details about weighting can be found on the NSSE Web site. **nsse.iub.edu/links/institutional reporting**
